INTRODUCTION

INTERNATIONAL STANDARD FOR EFFICIENCY

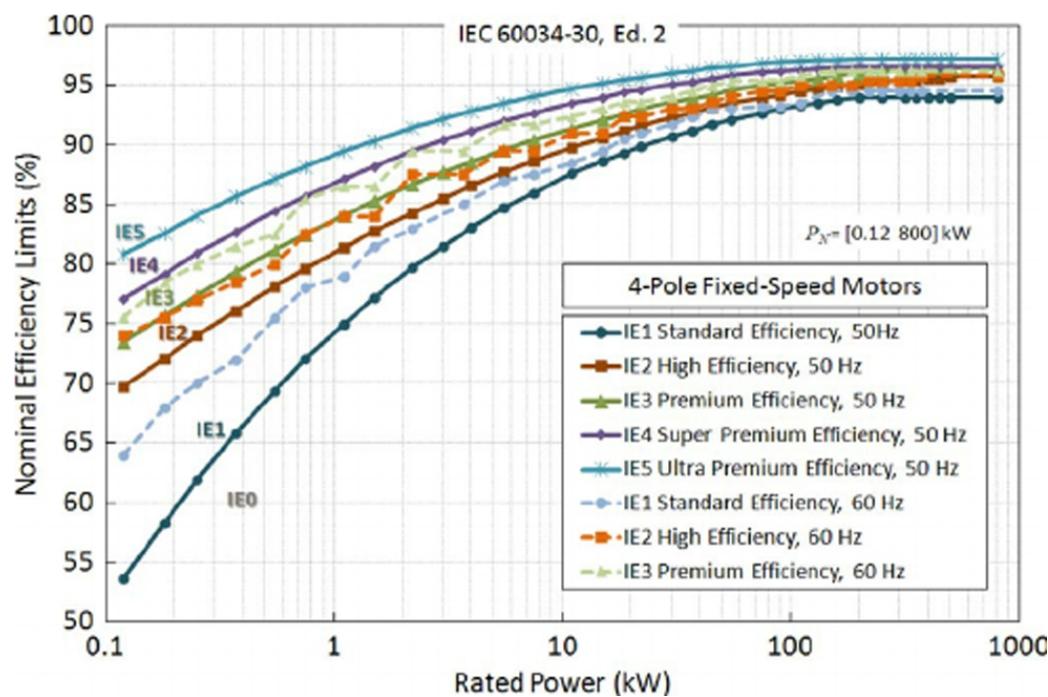

The efficiency factors defines efficiency of motors when transforming electrical energy into mechanical energy.

The International Electrotechnical Commission (IEC), in order to harmonize the energy consumption regulations aimed to reduce the CO₂ emissions and the impact of industrial operations on the environment, has established the standard IEC 60034-30:2014 which defines energy efficiency classes IE1, IE2, IE3, IE4, IE5 for low voltage three phase 50Hz and 60 Hz in power range 0.75 kW to 375 kW motors.

EFFICIENCY CLASS	DESIGNATE
IE1	Standard Efficiency
IE2	High Efficiency
IE3	Premium Efficiency
IE4	Super Premium Efficiency
IE5	Ultra Premium Efficiency

These motors are also with compliance in efficiency standard indicated in IS 12615:2018/IEC - 60034.

We continuously improve product design according to the new standards IEC 60034-30 and IEC 60034-2-1.

TECHNICAL CHARACTERISTICS

BENEFITS OF HIGH EFFICIENT MOTORS

- Lower operating cost leads to short payback period due to higher efficiency.
- Motors have lower heat dissipation and temperature rise leads to increase life of motor.
- Higher thermal margins in design which reduces the cost.
- Reduction in CO₂ emissions.

STANDARD FOR MOTORS

All motors are designed as per the following Indian and International standards.

TOLERANCES

Tolerance in performance of the motor is as per Indian & international standard.

For industrial motors according to IS 325/ IEC 60034-1, certain tolerances must be allowed on guaranteed values, taking into consideration the necessary tolerances for the manufacture of such motors and the materials used. The standard includes following remark:

Schedule of tolerance

1. Efficiency (η)	
· Motors up to and including 150 kW	-15 % of $(1 - \eta)$
· Motors above 150 kW	-10 % of $(1 - \eta)$
2. Total losses (applicable to motors with ratings > 150 kW)	+10 % of the total losses
3. Power factor ($\cos \phi$)	-1/6 of $(1 - \cos \phi)$; min 0.02, max 0.07
4. Slip at full load and at working temperature	
· For Motors having output < 1 kW	± 30 % of the slip
· For Motors having output ≥ 1 kW	± 20 % of the slip
5. Locked rotor current (IST) with any specified starting apparatus	+20 % of the current
6. Locked rotor torque (TST)	-15 % to +25 % of the torque (+25 % may be exceeded by agreement)
7. Pull out torque (TPO)	-10 % of the torque except that after allowing for this tolerance the torque shall be not less than 1.6 or 1.5 times the rated torque
8. Moment of inertia	± 10 % of the value

Dimension Tolerances
